- Create a function where for every drill-down, there is shown maximum, minimum and average value of column. Also would be good if length of data indicator is present6

- In metric type, value "undefined" should be ignored in our prototype

- For creating line chart with history, a column "measure_fact_date" from fact table should be used as measuring date (daily/weekly/monthly/yearly measurements)

- Metrics abbreviations, if possible, should be translated (eg. "DQKPI" > "Percentage")

- Is it possible to add filter, where user can select for example: "Last 10 runs" or "All runs". Maybe a numeric box like ("Last " + #user entered run number# + " runs")
